

SOTO DE TORRES FOR BODEGAS TORRES

PROJECT: SOTO DE TORRES FOR BODEGAS TORRES

LOCATION: LABASTIDA . LA RIOJA . SPAIN

YEAR: 2015

This project will be constructed in two stages .In a first stage, the existing industrial building will be integrated into the existing surroundings, and in a second stage the building will be promoted and design as a Visitors' Center.

The generating idea of this landscaping ?? project is to "reconstruct" visually the original mountain, repopulating it with native plants and groups of trees. The facades will be treated with concrete, mimicking the texture and the colors of the original mountain.

In the Northeast facade due to its height, we propose to make a stepped concrete portico planted with trees. At the end of the concrete portico an armed land slope will be built.

The second phase of the project will be to build a parking on the south end of site which will communicate by a footpath with the existing industrial building.

The Visitor Center will be built within the industrial building, and will have three levels. On the top floor a large veranda overhanging will give a panoramic view over the surrounding fields, in the basement a suspended glass tasting room will hang over the wine barrels.
