

DELIGIANNIS HOUSE

PROJECT: DELIGIANNIS HOUSE

LOCATION: MIKONOS . GREECE

YEAR: 2000

This family residence is located in the southeast of Mykonos, on a plot of large dimensions, near Lia Beach. The architectonic proposal improves, through the creation of successive courtyards, the natural conditions of the island in this area, such as its rugged terrain and the strong winds. The widest patio contains the parking area with pergolas; while the other, with vegetation protects the main entrance by high stone walls that form its perimeter.

The creation of emotion is one of the objectives of the project, and this is achieved just crossing the threshold, where a large window in the hall surprises visitors with a series of wonderful views - first of all, the pond, then the infinity pool and finally the sea. The same hall separates the two areas of the house, which were designed on a single level with a linear structure. The common areas, are extended to the outside through a large porch with bar and a barbecue area.

The thick walls, irregular -shaped cubes, the different heights and the rough texture evoke and respect the traditional houses of Mykonos.
